

# **SPILLCON**

20 – 24 May 2019  
Perth, Australia

## **SPEAKER**

### **Thomas Selbekk**

Thomas Selbekk's oil & gas career has spanned close to thirty years and he has been involved in operational roles within drilling, production and reservoir engineering for operators and service companies. Mr Selbekk specializes in dynamic well control and was central in the well kill team during the kill operations of the Deepwater Horizon blowout in the Gulf of Mexico in 2010. In his current role in Add Energy's well control and blowout support team, Mr Selbekk and his colleagues are involved in contingency planning and have since 1991 been involved in the response teams on more than 70 live well control incidents.

Mr Selbekk also headed Add Energy's blowout and well control team in Australia and Southeast Asia.

Prior to Add Energy, Mr Selbekk worked with completions, workovers and drilling operations for Amoco Norway Oil Company in their demanding chalk fields in the North Sea, and with Finnish oil company Fortum in Norway and the Middle East."
